

Smart Bear Releases CodeReviewer™ v3.1

Austin, TX – July, 29 2005– Smart Bear Inc., the leading provider of code review solutions, today announced the release of the newest version of their flagship product, CodeReviewer™. CodeReviewer™ v3.1 combines multiple new features as well as improved workflow.

CodeReviewer™ enables peer review of source code changes before files are checked into version control. Developers can comment on specific lines of code, pass around reviews, and automatically save an audit trail in the version control system. Reviewers can reference a customized project-wide checklist while performing reviews.

“The version 3.1 release is exciting because it enhances the existing workflow for developers by allowing an ongoing dialogue of comments and source code changes between reviewers and developers” said CEO and Founder Jason Cohen. As part of the new feature set, CodeReviewer™ v3.1 is now fully integrated with Smart Bear’s CodePickle™. CodePickle™ saves and restores local source code changes, letting developers "context-switch" between development tasks.

“Multiple customers have asked about the integration between CodePickle and CodeReviewer. This integration provides developers with flexibility to manage multiple sets of changes in parallel, as well as provides a way to avoid being blocked while code is being reviewed. I am very pleased with the new release and expect that most of our customers will upgrade very soon” added Cohen.

Smart Bear will continue to provide support for v3.0 to existing customers. CodeReviewer™ v3.1 will replace v3.0 and all existing customers with support agreements will be able to upgrade immediately. Downloads and trial evaluations are available at <http://www.smartbearsoftware.com/downloads-main.php#cr>
